On-call Runbook

The on-call SRE carries the pager for one week, Monday 10:00 to Monday 10:00 UTC. Acknowledge a page within 5 minutes and open an incident in the incident queue within 15 minutes.

1. Check the status dashboard and the latest deploys.
2. Name an incident lead for severity 1 and 2.
3. Post updates in the oncall channel every 30 minutes.

payments-service returns 503

If payments-service returns 503 errors after a deploy, roll back the deploy with nwctl rollback payments-service. When the error rate stays above 1 percent for 10 minutes after the rollback, page the payments team lead.

Build runners out of disk

Prune the Docker image cache with nwctl runners prune. Runners above 95 percent are drained first.
